

Scissors Jack

The original jacks used in the C1s are getting pretty scarce and rather expensive. If you are restoring your car for NCRS judging you will need to find an original or a very good reproduction. However, if you are restoring your car to be a driver you just need something that will fit properly in the trunk and that will actually work in an emergency. A satisfactory substitute scissors jack is available from Norco Industries (norcoindustries.com), for about \$20. Their part number is 82002B. Paint it black and it will certainly pass cursory inspection as if it were the real deal.

For those of you without internet connection, you can reach Norco at: Norco Industries, Inc., 365 W. Victoria St., Compton, CA 90220.
